

§ 583.8

which is counted as U.S./Canadian parts content is also counted as being value which originated in a country other than the U.S. or Canada.

[59 FR 37330, July 21, 1994, as amended at 60 FR 47895, Sept. 15, 1995]

§ 583.8 Procedure for determining country of origin for engines and transmissions (for purposes of determining the information specified by §§ 583.5(a)(4) and 583.5(a)(5) only).

(a) Each supplier of an engine or transmission shall determine the country of origin once a year for each engine and transmission. The origin of engines shall be calculated for engines of the same displacement produced at the same plant. The origin for transmissions shall be calculated for transmissions of the same type produced at the same plant. Transmissions are of the same type if they have the same attributes including: Drive line application, number of forward gears, controls, and layout. The U.S. and Canada are treated separately in making such determination.

(b) The value of an engine or transmission is determined by adding up the prices paid by the manufacturer of the engine/transmission for each component comprising the engine/transmission, as delivered to the assembly plant of the engine/transmission, and the fair market value of each individual part produced at the plant. All value added at the engine/transmission plant is otherwise excluded from the calculation of origin. Individual parts refers to the most basic level of parts used to assemble an engine or transmission and not subassemblies.

(c) *Determining the country of origin of components.*

(1) Except as provided in (c)(2), the country of origin of each item of equipment is the country which contributes the greatest amount of value added to that item (the U.S. and Canada are treated separately).

(2) Instead of making country of origin determinations in the manner specified in (c)(1), a manufacturer may, at its option, use any other methodology that is used for customs purposes (U.S. or foreign), so long as a consistent

49 CFR Ch. V (10–1–96 Edition)

methodology is employed for all components.

(d) *Determination of the total value of an engine/transmission which is attributable to individual countries.* The value of an engine/transmission that is attributable to each country is determined by adding up the total value of all of the components installed in that engine/transmission which originated in that country.

(e) The country of origin of each engine and the country of origin of each transmission is the country which contributes the greatest amount of value added to that item of equipment (the U.S. and Canada are treated separately).

[59 FR 37330, July 21, 1994, as amended at 60 FR 47895, Sept. 15, 1995]

§ 583.9 Attachment and maintenance of label.

(a) *Attachment of the label.*

(1) Except as provided in (a)(2), each manufacturer shall cause the label required by § 583.5 to be affixed to each new passenger motor vehicle before the vehicle is delivered to a dealer.

(2) For vehicles which are delivered to a dealer prior to the introduction date for the model in question, each manufacturer shall cause the label required by § 583.5 to be affixed to the vehicle prior to such introduction date.

(b) *Maintenance of the label.*

(1) Each dealer shall cause to be maintained each label on the new passenger motor vehicles it receives until after such time as a vehicle has been sold to a consumer for purposes other than resale.

(2) If the manufacturer of a passenger motor vehicle provides a substitute label containing corrected information, the dealer shall replace the original label with the substitute label.

(3) If a label becomes damaged so that the information it contains is not legible, the dealer shall replace it with an identical, undamaged label.

§ 583.10 Outside suppliers of passenger motor vehicle equipment.

(a) For each unique type of passenger motor vehicle equipment for which a
